

Addendum to FilePlottingTools v3.1 Installation Instructions

The purpose of this addendum is to provide a workaround for installation errors that some users may encounter. If you do not encounter any installation errors when following the instructions in the User's Manual, then please disregard.

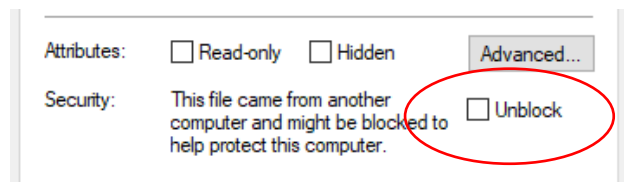

Some users may encounter a Windows Defender / Smart Screen error that prevents the setup.exe file from running and/or a Customization Installer error after running setup.exe that references "customized functionality in this application will not work because the certificate used to sign the deployment manifest for FilePlottingTools or its location is not trusted." The FPT development team is working toward a permanent solution, but as of December 2024 one has not been implemented. The following workaround will allow for successful installation.

Important note: The user must have Elevated Privileges in order to perform the following steps.

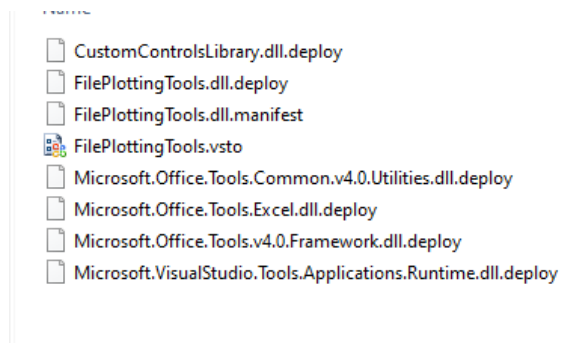

1. After unzipping the FilePlottingTools_v3.1_Release.zip file, navigate to the FilePlottingTools Installation folder.

2. Right click on the setup.exe file and select "Properties."
3. Check the "Unblock" box and click "OK."

4. Repeat that process for the FilePlottingtools.vsto file.
5. Repeat that process for all files in the Application Files folder (8 files total).

6. Double-click setup.exe; installation should complete successfully.
